

# Growth continues at Everyday Technologies

Everyday Technologies serves more than 400 Western Ohio capital equipment manufacturers with the finest precision sheet metal design and production available today. Equipment manufacturers, under increasing pressure to customize existing product lines and introduce innovative new designs into their

Toal

markets, are turning to Everyday Technologies for the thorough attention and rapid production of new components. When the innovation is an enormous success, Everyday has the productive capacity to support its customers' expanding production needs and drive down part costs.

President Mike Toal has released the following report:

In March 2007, Everyday introduced a second 4000 Watt laser cutting machine to its automated material handling system, doubling

capacity at the Sidney facility. The 24/7, "lights out" system feeds any of 30 different sheet materials and thicknesses to two separate lasers simultaneously. The system reduces material handling and turn around times on production parts as well as prototypes. Run in combination with its offline, 3D forming program and laser inspection and verification system, Everyday has the fastest possible order to production fulfillment capabilities available for precision sheet metal fabrication.

Serving capital equip-

ment manufacturers and specialty machine designers requires an uncompromising commitment to fast, exact, new part production.

In 2007, Everyday increased new part production by 20 percent to 6,000 new, unique designs for its customers in Western Ohio. Part development and process control software allows Everyday to translate any customer's design seamlessly into its production equipment, generate intermediate quality checks, and provide first article inspections on each new

design. Part programming is now done 24 hours per day and includes 3D translation of all process information.

Everyday has completed its eighth year of ISO 9001 certification. Our 80 dedicated employees each bring a special talent and desire for customer satisfaction. Everyday is united in its mission to supply the finest quality sheet metal and fabricated parts to capital equipment customers in Western Ohio. We thank all our valued customers for their continued confidence in Everyday Technologies.

## Bensar begins Ross Casting construction

"Bensar Developments Co. experienced a steady demand for industrial and warehouse space throughout 2007," according to Nick Bensman, president. Forecast for 2008 indicates a steady and improving economy as the year progresses.

Bensman

vides for future building expansion. We welcome Ross's commitment to our community. The completion date is set for July 1, 2008.

With the completion of the Ross facility, Bensar will have 3 million square feet of industrial space under roof in the area.

Bensar is proud to be a part of the Sidney-Shelby County Community. Our customers that locate and expand in the area over the years have been very pleased with our area's quality of life. This is a result of the spirit of cooperation and the collective efforts of the city of Sidney, Shelby County Commissioners, Western Ohio Development Council and the Sidney-Shelby County Chamber of Commerce.
